Mechanistic insights into the alkaline isopechelinase superfamily. The alkaline isopechelinase (AIlp) superfamily is a family of digestive enzymes related to the pancreatic alpha-amylase and alpha-chymotrypsin families, which hydrolyse alpha-amylose or alpha-chymotrypsinogen. They belong to the amidohydrolase superfamily and are characterised by a four-domain structure and a catalytic triad of Asp, His and Ser. The three-dimensional structures of several AIlp members were determined by X-ray crystallography, and this revealed the similarity of their catalytic domains, despite their considerable diversity. Two-dimensional NMR studies of the substrate and the product of different enzymes in complex with each other and with substrate analogues revealed the interactions between the enzyme and the substrates or inhibitors. The structures of the active sites of AIlp members showed that the catalytic triad is involved in binding the residues at subsites -1 and +1 of the substrates. The oligopeptide binding sites in the AIlp members are similar, with the exception of the arrangement of the catalytic residues in the catalytic pocket, which are arranged in different order and the length of the loops between the catalytic residues. In this review, the important structural and catalytic properties of the AIlp members are discussed./*=== Copyright (c) 2001-2011 Joel de Guzman Distributed under the Boost Software License, Version 1.0. What's New In?

Add objects and text to sheets and blocks in your drawing, and view the markup as a result. Include links to external web pages, PDFs, or files. (video: 4:05 min.) Set-up custom markup to perform operations on each object or text insertion. Save your markup as a new custom object or a sheet. Keep your custom markup working even when you switch to a new drawing session. Change the appearance and behavior of existing custom objects or custom markups. Use the AutoCAD Design Center to access the new options or modify existing ones. Share markups and custom objects with your team, or share your own markups and custom objects. All of this, plus new features and enhancements, is available in AutoCAD as well as AutoCAD LT. Drawings with objects: Create drawings with objects, and other layers, in the block layer. All these objects and layers can be moved, resized, and deleted, as well as tracked using Layers. Layer objects together using objects and text. Place objects on multiple layers, such as your text layers and line layers. Draw a Line of Text using the Lines feature. Use this feature to create lines of text, ranging from a single character to hundreds of characters. Choose from multiple object and text fonts in AutoCAD and AutoCAD LT. Use the Layout Editor to edit or insert object snaps. Edit the size, shape, and position of a text box using the Text Editor. Sketch a freehand drawing, using the Line or Rectangle tools. Code snippets: Use the Code Snippet Manager to automate creating common drawings using existing code. Insert a table of values or a standard chart in your drawing. Insert a scaled arc. Easily insert text, tables, and coordinates. Insert the number of rows or columns from a table or spread sheet. Insert a drawing based on a spreadsheet. Insert a constant value into your drawings. Embed code snippets in your drawings. AutoCAD reads your code snippets and creates new drawings based on the code you enter. Data Review: Edit and annotate files in more than 15 popular file formats, including Office Open XML, SVG, EMF, JPEG
